Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 1 ADH13941

The invention relates to a novel nucleic acid molecule (I) comprising a sequence encoding monocyte-chemoattractant-protein-1 (MCP-1) or a protein having the biological activity of MCP-1. A protein encoded by a nucleic acid of the invention has cytostatic, and antiarteriosclerotic activity. A nucleic acid of the invention may have a use in gene therapy. A compound of the invention may have a use in gene therapy. A compound of the invention is useful in the preparation of a medicament for the treatment of atherosclerosis or cancer e.g. cervical carcinoma. A Novel nucleic acid molecule encoding monocyte-chemoattractant-protein-1, useful in gene therapy, for treating atherosclerosis and cancer. ds; human; monocyte-chemoattractant-protein-1; MCP-1; cytostatic; antiarteriosclerotic; gene therapy; atherosclerosis; cancer; cervical carcinoma. Human monocyte-chemoattractant-protein-1 related DNA SEQ ID NO:4. Poustka A; Finzer P, Delius H, Disclosure; SEQ ID NO 4; 30pp; English. presence of an FTI. The method is useful for determining whether a patient will respond to treatment with a FTI such as (B)-6-[amino(4-chloropheny])(1-methyl-1H-imidazol-5-yl)amethyl]-4-(3-chlorophenyl)-1-methyl-2-(1H)quinolinone, montroring the therapy of a patient, treating a patient with leukemia with FTI if the analysis indicates that the patient will respond. This sequence corresponds to a gene whose expression may be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2486
The present invention relates to a human cell line, which lacks major histocompatibility class I(MHC-I) and MHC-II antigens and which has been modified to comprise and express a gene encoding an immunomodulator and a gene encoding an antigen of Epstein-Barr virus (EBV). The human cell line, compositions and methods are useful for inducing or stimulating an immune response in a human to an EBV-associated cancer, where the human immune are insk for Hodgkin's lymphoma, nasopharyngeal carcinoma, gastric carcinoma, Burkit's lymphoma, T-cell lymphoma, B-cell lymphoma, parotid carcinoma, bareast carcinoma, and leiomyosarcoma. The present sequence represents a nucleotide sequence associated with the cell line
                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                              180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2366
                                                                     This invention relates to a novel methods and animal models for testing candidate drugs that can be used for the treatment or prevention of agerelated macular degeneration (AMD). Specifically, it refers to administering a candidate drugs to gene knockout mice, in particular Ccl2-deficient, Ccr2-deficient and/ or a Ccl2-deficient/Ccr2-deficient dual knockout mouse. The present invention describes analysing the knockout mouse eye for development or regression of drusen and/ or lipofuscin accumulation, as well as for the effect of a candidate drug on Bruch's membrane, retinal degeneration and/ or choroidal neovascularisation. Accordingly, such compositions exhibit ophthalmological activities and can be used for gene therapy purposes. This polynucleotide sequence is the human Ccl2 promoter region DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

                                                                                                                                    This invention relates to a novel methods and animal models for testing candidate drugs that can be used for the treatment or prevention of agerelated macular degeneration (AMD). Specifically, it refers to administering a candidate drug to gene knockout mice, in particular Collectiont, Corleficient and/ or a Colledicient/Corleficient dual knockout mouse. The present invention describes analysing the knockout mouse eye for development or regression of drusen and/ or lipofuscin accumulation, as well as for the effect of a candidate drug on Bruch's membrane, retinal degeneration and/ or choroidal neovascularisation. Accordingly, such compositions exhibit ophthalmological activities and accumulation and ensed for gene therapy purposes. This polymucleotide sequence is the human Coll gene and enchancer region DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                 Testing candidate drug for treating age-related macular degeneration, by administering drug to Cc12-deficient, Ccr2-deficient knockout mouse, and analyzing development or regression of drusen and/or lipofuscin

The invention relates to single nucleotide polymorphisms in the gene concoling human small inducible cytckine A2 (SCYA2) polypeptide. A method conclude human small inducible cytckine A2 (SCYA2) polypeptide. A method for haplotyping the SCYA2 gene in an individual comprises identifying the coff the copies of the small specification or whether both copies are defined by a haplotype pair. This method is useful in genotyphing, whereby all possible haplotype pair. This method is useful in genotyphing, whereby all possible haplotype comparing the frequency of the haplotype or haplotype or haplotype or haplotype pair of the frequency of the haplotype or haplotype pair in a reference population, where a higher haplotype cor haplotype pair in a reference population, where a higher haplotype cor haplotype pair is corresponding by comparing the trait with the frequency of the haplotype cor haplotype pair. SCYA2 and its corresponding by comparing the expression and function of SCYA2, and in screening for for studying the expression and function of SCYA2, and in screening for candidate drugs to treat diseases related to SCYA2 and in screening for the haplotype screening sequence represents genomic DNA which encodes the human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grava or human grav
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     r-crecaertricectricacaeaaagcagaarccrraaaaaraacccrctraerr 239
                                                                                                                                                                                                                                                                                                                                                                                                                                     New genetic variants having polymorphisms in the small inducible cytokine Al (SCYA2) gene, useful for studying the function of SCYA2, and for treating disorders affected by expression or function of the SCYA2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 gggagccgaaaagcjigagagcrccjicciggcagaggccciiggaaigiggcci

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid reluxaemia, Alzhaimer's disease, Alzhailepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   183

comprising: (a) a sequence comprising at least 15 contiguous nucleotides of a sequence comprising at least 15 contiguous nucleotides of a sequence comprising at least 15 contiguous nucleotides of a sequence comprising variant sequences (A) from Table 4 given in the specification; or (b) a sequence that is complementary to (A). Also described: (1) an array of (PN) is comprising two or more of the isolated described: (1) an array of (PN) in an individual; (3) a computer-readable storage medium, where each record has a field identifying a base occupying a (PN) site and a location of the polymorphic site; and (4) a occupying a (PN) site and a location of the polymorphic site; and (4) a signal carrying adra for access by an application program having executed associated with multiple sclerosis. ACF64025 to ACF64424 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 INGTITICTICGETICCTICTTITITICTGCAGTTTCGCTTCAGAGAAAGCAGAATCCTTAA 60

                                                                                                                                                                                                                                                                          New isolated cancer associated nucleic acids comprising at least 10 contiguous nucleotides, useful for diagnosing, preventing and/or treating cancers such as leukemia and lymphoma.
                                                                                                                                                                                                                                                                                                                                                      The present invention relates to cancer associated sequences (ADO97025-9098004). The sequences are useful for the diagnosis, prevention and/or treatment of cancer, such as leukemia and lymphoma. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formate directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120 TGAAGGTAAGCTGGCAGCCTGACATGCTTTCATCTAGTTTCCTCGCTTCCTT

The present invention describes a composition (I) comprising: carriers and immunostimulants; and a polypeptide (II) of a ovarian tumour colypeptide encoded by a polyputoleocide (III) having a cDNA sequence (S1) from the 10912 nucleotide sequences as given in ABL77023 to ABL87934, (III) encoding (II) having a sequence (S2), a T cell population of (II), cor antigen presenting cells that express (II). (I) has cytostatic cativity. An oligonucleotide (IV) that hybridises to (S1) can be used for activity. An oligonucleotide (IV) that hybridises to (S1) can be used for cativity. An oligonucleotide (IV), detecting the amount of polypucleotide (NY), detecting to (S1) can be biological sample from a patient with (IV), detecting to a predetermined cutoff value and thereby detecting ovarian cancer in the patient, where the camount of polypucleotide hybridising to (IV) and comparing the amount to a predetermined cutoff value and thereby detecting ovarian cancer in the patient, where the computating and/or expanding T cells specific for an ovarian cutour protein comprising contacting T cells with (III) and/or (III) is useful in design and preparation of ribozyme molecules for inhibiting expression of the tumour polypeptides and proceins in tumour cells; and contacting the expression of the tumour polypeptides and proceins in tumour cells; and the contacting the contacting receins in tumour cells; and the contacting the contacting receins in tumour cells; and the contacting the contacting receins in tumour cells; and the contacting the contacting captures and contacting contacting captures and contacting captures and contacting captures and contacting captures and contacting captures and contacting captures and contacting captures and contacting captures and contacting captures and contacting captures and contacting captures and contacting captures and contacting captures and contacting captures and contacting captures and contacting captures and contacting captures captures captures captures captures captures captures captur

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          14-AUG-2000;
                                          09-AUG-2001
The invention relates to isolated polymucleotide (I) and polypeptide (II) cadences. (I) is useful as hybridiation probes, polymerase chain cadences. (I) is useful as hybridiation probes, polymerase chain. Consequences (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymicleotides are also used in disponsition as expressed sequence tags for identifying expressed consequily in general production of (II) is useful in gene therapy techniques to restore normal consequily for generating attibodies against it, detecting or quantitating a cuseful for generating antibodies against it, detecting or quantitating a polyment. (II) and its binding partners are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of supplement. (II) and its binding partners are useful for treating of supplement. (II) and its binding partners are useful for treating disorders of involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in polypeptide and polymucleotide sequences have applications in polypeptide and polymucleotide sequences have applications of mutations diagnostic formations while and products dependent on DNA and conding sequences. Abs64197-Abs94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the conding application of the printed specification, but was obtained in the printed specification, but was obtained in the printed specification, but we be applied in the printed sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1362 ccTTGCCCAGCTCGAAAAAGGGGAGAGGGTCTGCGGGCAAGTCGACCGCCGCCGCCTACTA 1421

Amountain a cid sequences given in AAMB1921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) to proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) collynucleotides may be used to produce the secreted (I), by inserting the molieic acids into a host cell and culturing the cell to express the colloning and polynucleotides may be used to produce the secreted (I), by inserting the protein. (I) proteins and polynucleotides may be used to prevent, cancers and cancer metastases of haematopoietic-related diseases, especially concern metastases of haematopoietic antigen genomic to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54950 and AAM83169 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   27616 reacraegeaaarrecriaacreccriarcrercaaregeceaarriraagesrrecri 27557

```
The invention relates to 592 polynucleotides which have been derived from a variety of human tissue sources and which encode novel secreted a variety of human tissue sources and which encode novel secreted a variety of human tissues can be used as probes for the identification and isolation of full length cDNA and genomic DNA. The identification and isolation of full length cDNA and genomic DNA. The comparison of polynucleotides and proteins can also be used as nutritional supplements. The proteins are useful in the treatment of various immune deficiencies of and disorders such as viral infections, bacterial infections, fungal confections, autoimmune disorders (e.g. rheumatoid arthritis, multiple infections, autoimmune thyroiditis and diabetes) and allergic reactions sclerosis, autoimmune thyroiditis and diabetes) and allergic reactions concursodesmerative diseases (e.g. Alzheimer's disease, Parkinson's disease), liver fibrosis, coagulation disorders (e.g. haemophilia), disease), liver fibrosis, coagulation disorders (e.g. cromn's disease) and tumours. They are also useful for regulating burns, incisions and ulcers. The proteins are also useful for regulating commune, incisions and ulcers. The proteins are also useful for regulating commune, incisions and ulcers. The proteins are also useful for regulating commune, incisions and for treating myeloid or lymphoid cell deficiencies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match 13.4%; Score 33.6; DB 6; Length 673; Best Local Similarity 52.9%; Pred. Laboratory Mouse DNR Resource (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligomucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil | 4732114 | gb| | 123072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into

polylinker; Site 1: Not I; Site 2: Eco RI; Plasmid DNA
from the normalized library NCI CGAP GC4 was prepared, and
ss circles were made in vitro. Following HAP purification,
this DNA was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified cDNAs from a pool
of 5,000 clones made from the same library (cloneIDs
1257096-1258631, l469064-1470983, and 1475592-1476743).
Subtraction by Bento Soares and M. Fatima Bonaldo. "

/note="Vector: pBeloBAC11; The ISU BAC library (Marek and Shoemaker, Genome 40.420, 1997) was constructed using the HindIII site in pBeloBAC11. The library consists of approximately 40,000 clones with an average insert size of approximately 40,000 clones with an average insert size of che library is done by PCR amplification of DNA pools.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AI280614 165 bp mRNA linear EST 21-DEC-1998 qu03h06.xl NCI CGAP_Ov23 Homo sapiens cDNA clone IMAGE:1963739 3' similar to contains PTRS.b3 PTRS repetitive element ;, mRNA

NCI_CGAP_DFO is a cDNA library containing the following tissue(s): Subchondral Bone. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GTTAAGCGTC.

1 Sequence 45164, Application US/10027632

2 Sequence 45164, Application US/10027632

3 Sequence 45164, Application No. US20030204075A9

3 GENERAL INFORMATION:

4 APPLICANT: Wang, David G.

7 TITLE OF INVENTION: Identification and Mapping of Single Nucleotide

7 TITLE OF INVENTION: POLYMorphisms in the Human Genome

7 TITLE OF INVENTION: 10827.129

7 CURRENT FILING DATE: 2002-04-30

7 CURRENT APPLICATION NUMBER: US 60/218,006

8 PRIOR FILING DATE: 2000-07-12
